

## How to calculate the freight price of your package.

Our aim is to ship your goods as cheap as possible.

For the shipment of packages we use the services of UPS and DHL. We always use the service which is the most economical for our customers.

In order to calculate the correct freight price for your package it is important to know the calculated weight of the package. The calculated weight is either the actual weight or the volumetric weight. The biggest of the two weights is the calculated weight.

### 1. Calculate the volumetric weight of your package

To calculate the volumetric weight of your package it is important to know which service (UPS or DHL) is taking care of your package. On the next page you can find the service most likely to be used for each of the European countries. In case your country is not in the list, neither UPS nor DHL provides a standard service. This does not mean we cannot ship your package. It simply means that we have to select a different service. We recommend to calculate the volumetric weight for both services.

**UPS:**  $\frac{(\text{length} \times \text{height} \times \text{width})}{5000}$

5000

**DHL:**  $\frac{(\text{length} \times \text{height} \times \text{width})}{4000}$

4000

### 2. Find the correct calculate weight of your package

The weight you need in order to find the correct price in the table on the next page is either the actual weight or the volumetric weight; whichever is the biggest.

### 3. Find the correct freight price of your package

To find the price select in the table the correct country and calculated weight.

---

*For example: We want to ship a box (50 x 40 x 33 cm) of 6,0kg to Denmark.*

*The volumetric weight of UPS is:  $(50 \times 40 \times 33) / 5000 = 13,2\text{kg}$*

*The volumetric weight of DHL is:  $(50 \times 40 \times 33) / 4000 = 16,5\text{kg}$*

*DHL is the carrier for boxes up to 20 kg, so we select DHL.*

*The calculated weight for the box is 16,5 kg, because the volumetric weight of the package is bigger than the actual weight.*

*The freight price therefore will be: € 27,50*
